

Plan for the next week

Over the next week our plan is to effectively wrap up everything, as of Wednesday (19/5) we are done with almost all features, except for the feature to transfer funds between bank accounts which would conclude the project.

- That part of the project would be completed by **Aryaman and Hung** (transferring funds between bank accounts feature).
- Following that we plan to carry out a few tests, by setting up 5-10 accounts between the bank, and conducting transactions between these accounts. This part of the process would be carried out **Allen**. These tests would include transfer of money from accounts with not enough money to carry out the transfer.
- We would also plan to carry out an “input sanitation” which would involve making sure that functions do not take an invalid input. **Allen and Hung**
- We also plan to run all functions/classes on the main file and make it easily comprehend able for the assessors. This would involve making another function file for each of the functions on the main. **Aryaman**
